Dear Reader,

As a recent Computer Science graduate with a minor in Digital Experience Design, I'm excited to bring my technical skills and user-focused mindset to a team where creativity and impact intersect. I'm passionate about building interactive, accessible experiences—whether in games, web platforms, or educational tools.

At Code Ninjas, I teach kids aged 6–16 how to code using JavaScript, Lua, and C#, while leading workshops in Unity, 3D printing, and robotics. I regularly adapt instruction to support students with ADHD, autism, and other learning needs—strengthening my ability to communicate clearly, problem-solve on the fly, and foster inclusive environments.

Outside the classroom, I co-authored a peer-reviewed paper on VR in physics education, contributed to multiplayer systems and Azure database integration at an indie game studio, and am currently building a Unity mobile game and React-based portfolio site.

I'm looking to join a forward-thinking team where I can keep learning, apply my experience in meaningful ways, and help create thoughtful, innovative solutions. Thanks for taking the time to consider my application—I'd love the opportunity to connect further.

Sincerely,
Nadir Bakridi
